

Hello Grade 8! 😊

Last week, we worked on Ratios, Rates and Proportional Reasoning. After reviewing ratios and equivalent ratios in lessons 1&2, we were asked to work on lessons 5&6 on Unit Rates and Proportionality.

This week, we will continue our work on this topic. Follow the link to <https://courseware.cemc.uwaterloo.ca/27>

Once there, under UNITS, on the left hand column, choose again Ratios, Rates and Proportions (N). We will be working on:

Lesson 7 Proportionality in tables and graphs

Lesson 8 Rates and Equations

Lesson 10 Rates and Proportional relationships

I would encourage you to take your time and go through each lesson carefully.

Once finished, I have left a practice exercise on Netmath (Using Proportional reasoning to solve problems) for you to follow up on what you have learned. There are also activities from last week that were sent if you haven't finished.

As always, space out the lessons (maybe one each day), take your time, and do what you can!

Have a great week!
